

**Name:** A. HARSHA MUKUNDHA

**Reg-No:** 192324070

27. Develop a C program for simulating the function of ls UNIX Command.

**Aim:**

The aim of this C program is to simulate the functionality of the `ls` command in UNIX. The program lists the files and directories in the current directory or specified directory.

**Algorithm:**

1. Take an optional directory path as input. If no directory is specified, use the current directory.
2. Use the `opendir` function to open the directory.
3. Use the `readdir` function to read each entry in the directory.
4. Print the names of the files and directories.
5. Close the directory using `closedir`.

**Procedure:**

1. Include necessary headers (`stdio.h`, `dirent.h`, `stdlib.h`).
2. Open the directory using `opendir`.
3. Read the directory entries using `readdir`.
4. Print the filenames of the directory entries.
5. Close the directory after reading.

**Code:**

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
#include <dirent.h>
```

```
int main(int argc, char *argv[]) {
```

```
    DIR *dir;
```

```
    struct dirent *entry;
```

```
    char *path = (argc > 1) ? argv[1] : ".";
```

```

dir = opendir(path);

if (dir == NULL) {

    perror("opendir");

    return 1;

}

while ((entry = readdir(dir)) != NULL) {

    printf("%s\n", entry->d_name);

}

closedir(dir);

return 0;

}

```

### Output:

The screenshot displays the OnlineGDB web interface. On the left, a blue sidebar contains the OnlineGDB logo and navigation links: "Welcome, Harsha Aripaka", "Create New Project", "My Projects", "Classroom" (with a "new" badge), "Learn Programming", and "Programming Questions". The main area on the right shows a terminal window with a black background and green text. The terminal output reads: "...Program finished with exit code 0" followed by "Press ENTER to exit console." with a cursor at the end of the line.
